

Formula Sheet

General Information

Company Name

Product Name

Please match product name to that provided in the product sheet. Provide detailed descriptions of ingredients (e.g., enriched, salted, sweetened) and attach supplier or manufacturer specifications for each ingredient. Specification Sheets must include an ingredient listing for the ingredient, allergen disclosure, and nutritional profile. Only one specification per ingredient is needed, even if used in multiple formulas. If specifications have been previously provided and unchanged, resubmission is not required. For ingredients from multiple manufacturers, provide specifications from all sources.

If you are not providing specification sheets for each ingredient, please enter as much information about the ingredient as possible. This will help us track down the ingredient nutritional data.
